

Winter

Protection of Gas & Electric Meters from
WATER, ICE, & SNOW accumulation, and
preventing damage when moving or
removing snow.

Large snowfalls throughout the State of Minnesota warrant a heightened awareness for residents to take proactive measures to safeguard outside meters and service regulator sets from accumulation of water, ice and snow. Snow removed from walkways, driveways, streets and parking lots should be placed near a meter set, service regulator or other facility. Contractors, residents and building owners should exercise caution when removing ice and snow so equipment or falling ice does not strike or damage facilities.
